Digital style guide

Table of contents

Colors

The colors give the brand stability, convey modernity and let the brand enough space for a flexible design. Basically the colors are divided into three color groups: Basic, Neutral and Accent colors. The two neutral colors can be used as font colors. „Straight Black" and „Straight White" and four of the basic colors „True Blue", „Modern Street", „Real Street", „The Asphalt" and „Gentle Grey". All three color groups with their individual colors can be flexibly combined and used.

**There are only two rules, which have to be observed:**

- As the name already says, the two accent colors serve „Superior Blue" and „Friendly Yellow" of accentuation and should therefore be used sparingly.
- When designing background forms, the following colors not used: „Fresh Ocean", „Flexible Water", Authentic Sky", „Safe Snow" and the neutral color „Straight Black".

Text Styles

Barlow is the corporate font of EagleBurgmann. For common advertising media and digital media, the font is used with uppercase and lowercase letters as well as with of the gauge 0 is used. The text is aligned right or left.
In exceptional cases, e.g. with the claim and individual keywords only upper-case letters are used.

Only the font styles shown are allowed.

The standard text colors are „Straight Black" and „Straight White". „True Blue", „Modern Street", „Real Asphalt" or „Gentle Grey" can be used for highlighting or optical differentiation.

The baseline of this font is deeper than other fonts. This means that the base line offset must be optically increased when using vertically centered font inserts (centered with respect to the top and bottom of the line).

Dichtungen sind Schlüsselkomponenten

Keine industrielle Produktionsanlage lässt sich ohne Dichtungen betreiben. Die Zahl der zu beherr-schenden Dichtstellen und Medien ist entsprechend groß. Es gilt, eine Vielzahl von Anlagenkomponen-ten abzudichten: Pumpen, Rührwerke und Kompressoren, Apparate, Armaturen und Flansche sowie gas- und flüssigkeitsführende Rohrleitungen und Kanäle. Die Zuverlässigkeit der gesamten Anlage hängt dabei von vielen Einzelteilen ab. Den Dichtungen kommt als Schlüsselkomponente eine hohe Be-deutung zu. Sie schützen Systeme und Komponenten vor äußeren Einflüssen und Kontaminationen und helfen, Emissionen zu verhindern. Darüber hinaus liegen in der Dichtungstechnik oft große Potenziale zur Kostensenkung – etwa durch prozessgerechte Auslegung oder angepasste Lösungen.
